Re: Guin Water Treatment Plant – New GAC Filtration
Krebs Project No. 21053

Dear Ms. White:

As discussed, the new GAC filtration units at the Guin Water Treatment Plant were put into service on Thursday, September 8, 2022. The Guin Water and Sewer Board has approved a PFAS testing plan that meets/exceeds the current ADEM testing requirements. They began implementing this plan with the following water samples taken on Monday, September 12, 2022:

- Raw Water from Intake at Purgatory Creek
- GAC Unit #1 Lead and Lag Vessels
- GAC Unit #2 Lead and Lag Vessels
- Finished Water

These samples were sent to a lab to undergo PFAS testing, and the results are expected to arrive within the next 2-3 weeks.

We anticipate that the project will reach final completion by the end of this month (September 2022).

Sincerely yours,

Krebs Engineering, Inc.
